BUC3106 · E-COMMERCE · GROUP ASSIGNMENT

Coursework II Takehome

Student Capstone Project: put a business online in two weeks

Issued: 21 October 2026 · Due and presented: 4 November 2026

Groups of up to ten students

Faculty of Computing and Informatics
Makerere University Business School

1. What This Project Is

Your group will take one business, real or invented, and set it up online as if it were launching tomorrow. By the end you will have a Google profile, a website, social media pages with professional content, a well organised WhatsApp catalogue, and payment options clearly shown on the website. You will also have a short business plan, a marketing plan, simple rules for trust and a security checklist. Then you will present it to the class.

You do not need any technical skills. An AI tool will write the website code for you, and Part 5 of this guide shows you, step by step, how to turn that code into real files and put them on the internet for free. If you can copy, paste and save a file, you can do it.

> **How to use this guide:** *Read Parts 1 to 4 together as a group today. Then follow the tasks in Part 5 in order. When you reach the website, follow Part 6 line by line. The AI prompt you need is in Appendix A.*

The aim is simple. In class you learned what e-commerce is. In this project you do it, and you find out what works for real customers in Uganda.

2. Your Launch Kit

Your group must finish the ten items below. Tick each one when it is done. Every item also shows which topic from the course it puts into practice, so by the end you will have used all eight.

No.	What you must have	What you hand in as proof	Topic	Done
1	A business snapshot and simple business model	One page	1 and 2	
2	A marketing plan	One page with a two-week content calendar	3	
3	A Google profile for the business	Screenshot of the profile, or the mock-up (see Task 3)	4	
4	Social media pages on at least four platforms, such as Facebook, TikTok, YouTube and LinkedIn, with 12 pieces of professional content	Links, screenshots and your Canva files	3 and 4	
5	A WhatsApp Business profile with a well organised catalogue	Screenshots of the profile and every catalogue collection	4	
6	A simple website, live on the internet	The web address and screenshots on a phone and a computer	7	
7	Payment options clearly shown on the website	The How to Pay page, plus a short explanation of your choices	5	
8	Rules and trust: image sources, a privacy notice and terms, honest claims	A short Rules Sheet and the policy page on your website	6	
9	Security basics applied	A completed security checklist	8	

No.	What you must have	What you hand in as proof	Topic	Done
10	A class presentation and a portfolio	Your pitch, and the portfolio in one PDF	All	

3. Getting Started

3.1 Form Your Group

Work in groups of up to ten students. No group may have more than ten members. Choose a group leader, and agree on one group email address and one shared folder, such as Google Drive, where all work is kept.

3.2 Choose Your Business

You may choose a real business or invent one. If it is a real business, you must have the owner's permission, which can be a short message from the owner, and you must show the owner your work. If you invent one, make it believable, with prices in Uganda shillings and customers in Uganda. Whichever you choose, the business must sell something physical or a service that needs delivery, must sell to both everyday customers and at least one kind of business customer, such as cafes, schools or offices, and must be able to take payment by mobile money. Ideas to start you off: a school uniform tailor, a phone repair and accessories shop, a fresh vegetable delivery service, a bakery that supplies cafes, a second-hand clothing seller, a barbershop with grooming products, an event decoration company, or a poultry products supplier. Choose something your group knows something about.

3.3 Share the Work

Every member must own at least one part of the work and help with at least two others. The table suggests roles for a group of ten. Smaller groups combine roles. Put each person's name on the work they make, and keep the contribution log in Appendix C, because part of your individual mark depends on it.

Role	What this person looks after	Tasks
Group Leader	Keeps the plan, runs the weekly check, puts the portfolio together.	All
Business Planner	The business snapshot, the model and the cost sums.	1
Marketing Planner	The marketing plan and the content calendar.	2
Google and WhatsApp Manager	The Google profile and the WhatsApp catalogue.	3 and 5
Social Media Manager	Creates and runs the social media pages.	4
Content Creator (one or two people)	Brand kit, posts, videos and graphics in Canva and AI tools.	4

Role	What this person looks after	Tasks
Web Builder (one or two people)	Creates the website files and puts the site online.	6
Payments Lead	The payment options, the How to Pay page and the customer survey.	7
Rules and Security Officer	The Rules Sheet, the policy page and the security checklist.	8 and 9
Presentation Director	The pitch, the slides and the rehearsals.	10

3.4 Five Rules for Everyone

First, never take or move real money, and never collect real customer information, on any page you make. Second, say clearly on every page and profile that this is a student project for BUC3106 at MUBS. Third, use the group email for all accounts, and agree as a group before any phone number appears on a public page. Fourth, use only images, music and text that you made or are allowed to use. Fifth, never invent customer reviews, awards or certificates, and never pretend to be a real business that you do not own. Breaking these rules costs marks.

4. Your Two-Week Plan

When	What your group should finish
Wed 21 to Fri 23 Oct	Form the group, choose the business, share the roles, set up the shared folder. Finish Task 1.
Sat 24 to Tue 27 Oct	Finish Task 2. Make the brand kit in Canva. Create the accounts for Tasks 3, 4 and 5. Ask the AI for the first version of the website.
Wed 28 Oct	Checkpoint: five minutes with the lecturer to show your business, your roles and your business snapshot.
Thu 29 Oct to Sun 1 Nov	Put the website online by Sunday. Fill the WhatsApp catalogue. Post your content. Finish the payment page.
Mon 2 to Tue 3 Nov	Finish Tasks 8 and 9. Complete the portfolio. Rehearse the presentation twice.
Wed 4 Nov	Hand in your portfolio and present to the class.

5. The Ten Tasks

Each task says what to do and what to hand in. Keep each piece short and clear. Quality and real evidence matter more than length.

Task 1: Business Snapshot and Model (Topics 1 and 2)

Do. On one page, say what the business sells, to whom and where. Say whether it is pure or partial e-commerce, and which types of e-commerce it uses, such as B2C, B2B, mobile and social commerce. Write one line on each of the five support areas of the framework: people, public policy,

marketing and advertisement, support services, and business partnerships. Write the value proposition in one sentence. Say which revenue models it uses, for example sales, subscriptions or transaction fees. Then do one simple calculation for a typical order: the selling price, the cost of the goods, delivery, the payment fee and the profit left.

Hand in. The one-page snapshot with the calculation.

Task 2: Marketing Plan (Topic 3)

Do. On one page, set one objective for the two weeks, say who your customers are, and say how you will use paid media, owned media and earned media, with one example of each. List ten phrases that a real customer would type into Google to find you, such as fresh vegetables delivery Kampala. Add a two-week calendar that shows what you will post, where and when.

Hand in. The plan, the ten phrases and the calendar.

Task 3: Google Profile (Topic 4)

Do. A Google Business Profile is how people find a business on Google Search and Maps. Google only allows profiles for real businesses that meet customers in person or travel to them, and it verifies them, so a made-up business cannot have a real profile. If your business is real and the owner agrees, create or improve the profile with the owner, using the owner's details. If your business is invented, build a complete mock-up instead. Write out everything the profile would contain: the business name exactly as it appears on your signs and pages, the category, a 750-character description, opening hours, the area served, phone and website, a list of services or products with prices, and ten good photos. Show it on a slide or a document that looks like the profile.

Hand in. Screenshots of the real profile, or the mock-up.

Task 4: Social Media Pages and Content (Topics 3 and 4)

Do. Create pages on at least four platforms, for example Facebook, TikTok, YouTube and LinkedIn. Choose them for your customers: LinkedIn is the one for business buyers. Use the same name, logo and colours on all of them, and write a short bio that says what you sell, where, and how to order. Add the website link and the line Student project for BUC3106 at MUBS. Then make 12 pieces of content in Canva or with AI tools: eight pictures, two short videos of 15 to 30 seconds, one carousel and one post for business buyers. Post at least six of them. Part 7 shows you how.

Hand in. Links to every page, screenshots of the posts, your Canva files, and the name of the person who made each piece.

Reality check. Ask at least five people outside your class to look at your pages and tell you what they think. Write down what they said.

Task 5: WhatsApp Business and Catalogue (Topic 4)

Do. Set up WhatsApp Business with a full profile and a well organised catalogue, as Part 8 explains. A good catalogue has at least eight products, grouped into three to five collections, with clear photos, clear names, prices in shillings and short descriptions. Add quick replies for greetings, for how to order and for how to pay.

Hand in. Screenshots of the profile, of every collection, and of the quick replies.

Task 6: The Website (Topic 7)

Do. Use the AI prompt in Appendix A to get a first version of a simple website. Then follow Part 6 to turn it into real files, test it and put it online for free. The site must have five pages: Home, Products, About, How to Pay and Order, and Policies. Choose the web address you would buy for the business, such as a .co.ug name, and say why you chose it.

Hand in. The live web address, screenshots on a phone and a computer, and the prompts you used.

Reality check. Ask five people who have not seen the site to find the price of a product, find how to pay, and find the delivery information. Note where they got stuck and fix at least three problems.

Task 7: Payments on the Website (Topic 5)

Do. Your website must have a page, or a clear section, called How to Pay. For each payment method you offer, show its name, three short steps that tell the customer how to pay, and the details to pay to. Choose from mobile money (MTN or Airtel), card payment through a licensed provider, bank transfer for business customers, and cash on delivery. Because no real money will move, use obvious sample numbers marked as sample, and write a note that payments are not active. Show how you will confirm a payment: you check your own mobile money or provider records, and never accept a screenshot alone as proof. Add a refund note. Then write a short explanation, half a page, of why you chose these methods for your customers, and whether you would accept cryptocurrency, using what the Bank of Uganda has said.

Hand in. Screenshots of the How to Pay page, and the explanation.

Reality check. Ask 20 people who could be your customers how they prefer to pay online and what worries them. Show the results in a small table, and let them guide your choices.

Task 8: Rules and Trust (Topic 6)

Do. Write a Rules Sheet of one or two pages. First, list every logo, photo, font and piece of music you use, with where it came from and whether you may use it. Second, check that nobody else already uses your business name. Third, write a short privacy notice and short terms in plain language, and put them on the Policies page of your website. The privacy notice should say what customer information you would collect, why, who can see it, and how long you keep it, in line with Uganda's Data Protection and Privacy Act, 2019. Fourth, list the claims you make, such as fresh, locally made

or fastest delivery, and the proof for each. Fifth, write what you would do if someone pretended to be your business online or posted fake reviews.

Hand in. The Rules Sheet and a screenshot of the Policies page.

Task 9: Security Basics (Topic 8)

Do. Turn on two-step verification for the group email and for every account you made, including social media, GitHub and Canva. Use long passwords, kept in a password manager or written in a safe place, and never share them in a group chat. Check that your live website address begins with https and shows a padlock. Make sure nothing private, such as passwords or personal phone numbers, is in your website files, because they will be public. Keep a copy of your website files and Canva work in the shared folder. Write five lines on what you will do if an account is hacked. Finally, hold a short drill: one member writes a fake suspicious message, and the others find the warning signs.

Hand in. The completed checklist, with screenshots that hide any private details.

Task 10: The Pitch and the Portfolio

Do. Present your business for 15 minutes, followed by 5 minutes of questions, as in Part 9. Put all your evidence together in one PDF portfolio, with a front page that lists the group, the business, the member roles and every link.

Hand in. The PDF portfolio, with the contribution log, the AI use log, the peer evaluations and each member's reflection at the end.

6. Build and Publish Your Website: A Beginner's Guide

This part is for people who have never made a website. A website is a few text files and some pictures in one folder. The AI writes the text files. Your job is to save them with the right names, check them, and put the folder online. Follow the steps in order. Use a computer for this part, or ask a group member who has one.

Step 1. Ask the AI for the website. Open an AI assistant. Copy the prompt in Appendix A, replace everything in square brackets with details of your business, and send it. The AI will reply with the name of each file followed by its code. Each file will be in its own grey box, and most boxes have a copy button.

Step 2. Make your website folder. On your computer, create a new folder with a simple name, such as greenbasket-site, with no spaces. Inside it, create another folder called images. Everything for your website will live in this one folder.

Step 3. Show file extensions. This step prevents the most common mistake. On Windows, open File Explorer, click View, then Show, then File name extensions. On a Mac, open Finder, then

Settings, then Advanced, and tick Show all filename extensions. Now you can see whether a file is really called index.html or accidentally index.html.txt.

Step 4. Save each file. Open Notepad on Windows. On a Mac, open TextEdit, click Format, and choose Make Plain Text. Go to the AI's answer, click the copy button on the first file, and paste the code into Notepad. Click File, then Save As. In the box that says Save as type, choose All files, so that Notepad does not add .txt. Type the file name exactly as the AI wrote it, for example index.html, make sure the encoding says UTF-8, choose your website folder, and save. Close the file and repeat for every other file, including style.css. The names must be exactly as the AI wrote them, in small letters, with no spaces. The page files and style.css all go in the main folder, not in images.

Step 5. Add your pictures. The AI will tell you which picture files the site expects, such as hero.jpg and product1.jpg. Make the pictures in Canva, download them as JPG, rename them to match exactly, and put them in the images folder. Keep each picture small, ideally under 300 KB, so the site loads quickly on mobile data.

Step 6. Test on your computer. Open your website folder and double-click index.html. It opens in your browser. Click every link and look at every page. If you see plain black text on white with no colours or layout, the page cannot find the style file. Check that the file is named style.css, that it sits in the same folder as index.html, and that the top of index.html has a line that says link rel stylesheet href style.css. If the pictures are missing, the picture names or the images folder name do not match exactly, and capital letters count. If strange symbols appear, save the file again with UTF-8.

Step 7. Make changes with the AI. To change something, paste the file into the AI and tell it plainly what you want, for example make the heading green and add a delivery section. Copy the new code, open the file in Notepad, select all, paste to replace the old code, save, and press refresh in the browser. Change one thing at a time, so you can see what each change did.

Step 8. Put it online with GitHub Pages. Go to github.com and create a free account using the group email. Click the plus sign at the top right and choose New repository. Give it the same simple name as your folder, choose Public, and click Create repository. On the next page click Add file, then Upload files. Open your website folder, select everything inside it, that is, the page files, style.css and the images folder, and drag it all into the browser window. Do not drag the outer folder itself, because index.html must sit at the top. Click Commit changes. Next click Settings, then Pages in the left menu. Under Build and deployment, set Source to Deploy from a branch, choose the branch called main and the folder called root, and click Save. Wait two or three minutes and refresh the page. A message appears saying your site is live, with its address. Open that address on your phone. The address starts with https, which means it is secure.

Step 9. Update the site and show who did the work. To update a file later, upload the new version with the same name using Add file and Upload files, and it replaces the old one. To make each web builder's work visible, go to Settings, then Collaborators, and invite them, so that the changes they make carry their names.

> **Free hosting note:** *GitHub Pages is free for public sites. Cloudflare Pages and Netlify are other free options, but their rules change, so stay with GitHub Pages unless your lecturer says otherwise. A public site is public to everyone, so never put private information in the files.*

If you get stuck, copy the exact problem into the AI and say what you expected to see. The Follow-Up Prompts in Appendix B include one for fixing problems. Every web builder must be able to explain, in simple words, what each file in the folder does. Expect to be asked.

7. Create Your Social Media Pages and Content

Create every account with the group email, switch on two-step verification, and write Student project for BUC3106 at MUBS in each bio. For a real business, use the owner's details with the owner's permission.

Facebook. Choose Create a Page, pick a category, add the business name, the logo as the profile picture and a Canva cover image, then fill in the description, the area served, the opening hours and the website link.

TikTok. Create an account with the group email, choose a business-style name that matches your other pages, add the logo and a short bio, and post short videos of the product, how it is made or packed, or a customer question answered.

YouTube. Create a channel from the group's Google account. Add the logo, a banner, a clear description and the website link. Upload at least two short videos, such as a 30-second introduction and a how-to-order video.

LinkedIn. This is the page for business buyers. Sign in with a member's personal account, choose Create a Company Page, and fill in the name, the website, a clear description and the logo. If LinkedIn does not allow the page for an invented business, make a careful mock-up in Canva and say so in your portfolio.

Other platforms. Instagram, X and Pinterest are optional extras. Use them if your customers use them.

Make professional content. Open Canva and build a brand kit: your logo, two colours and two fonts, saved so that every post looks the same. Use the Canva templates and the AI tools for pictures and first drafts of captions, and ask the AI for a two-week calendar using the prompt in Appendix B. Then check every fact, correct the spelling, and make sure the words on every picture are easy to read on a phone. Tell people when a picture was made with AI. Use only pictures and music that you made or that Canva or another source allows you to use, and write down where each one came from.

What good looks like. Every page has the same name, logo and colours. Every bio says what you sell and how to order. Posts are useful, not just adverts, so mix photos of the product with answers

to customer questions and short stories of how you work. Every post invites the customer to do one clear thing, such as order on WhatsApp.

8. Set Up WhatsApp Business and Its Catalogue

Install WhatsApp Business, which is a separate app from ordinary WhatsApp, on a phone whose number the group agrees to show publicly. A spare SIM works well. Open the app and follow the set-up. Add the business name, the category, a short description, the area you serve, your opening hours, the email and the website link. Add the logo as the profile picture.

Now build the catalogue. Open the Catalog section and add your products one at a time. Each product needs a clear photo on a plain background, a name that says exactly what it is, including the size or quantity, a price in Uganda shillings, a short description that answers the first question a customer would ask, and an item code that matches the website. Then group the products into three to five collections, such as by type or by price, and give each collection a clear name. Check that the names, prices and descriptions are the same on WhatsApp, on the website and on social media, because customers notice when they differ.

Add quick replies, which are saved messages, for a greeting, for how to order, for how to pay, and for delivery times. Add a greeting message and an away message. Use labels to track orders, such as new order, paid and delivered. When the catalogue is ready, copy its link and put it on your website and in every social media bio. Menus in the app change over time, so if a button has moved, look around in the same section or ask the AI how to find it.

9. The Pitch to the Class

You will present for 15 minutes and then answer questions for 5 minutes. Treat it as a pitch to investors, not a report. Start with a short hook about the customer’s problem. Then explain the business and its model, show your pages and the content you made, and demonstrate the website live on a phone, including the How to Pay page and the WhatsApp catalogue. Explain your payment, rules and security choices, and finish with what went wrong and what you changed, because that shows real learning. Every member must speak or demonstrate something. Other groups will act as an investor panel and score you. Any member may be asked a question about their own work or about the website files.

10. Contributions and Marking

You earn two kinds of marks. The group mark is for the work you produce together, and the individual mark is for your own contribution. Your final mark is seventy percent of the group mark plus thirty percent of your individual mark, so nobody can ride on the group and nobody who carries the group is ignored.

10.1 The Group Mark (100 marks)

Task	Marks	What earns top marks
1. Business snapshot and model	8	Clear, correct and the numbers add up.
2. Marketing plan	6	A clear objective, a good mix of media and useful search phrases.
3. Google profile	5	Complete and accurate, real or a convincing mock-up.
4. Social media pages and content	18	Four platforms, consistent branding, polished and honest content, real feedback.
5. WhatsApp catalogue	8	Well organised collections, clear photos, names and prices, useful quick replies.
6. Website	20	Live, working on a phone, five pages, tested with real people, and every builder can explain it.
7. Payments on the website	8	A clear How to Pay page, sensible choices backed by the customer survey.
8. Rules and trust	6	Honest claims, sources listed, usable privacy notice and terms.
9. Security basics	6	Controls really applied, with evidence.
10. Pitch and portfolio	15	Confident, real, every member involved, strong answers to questions.
Total	100	

10.2 The Individual Mark (100 marks)

Part	Marks	Evidence
Contribution evidence	35	Your name on specific work, and your entries in the signed contribution log.
Peer evaluation	25	Ratings from your teammates.
Individual reflection	20	An honest reflection of about 300 words.
Ownership questions	20	How well you explain your own work and the website at the pitch.
Total	100	

Groups that go clearly beyond the brief can earn up to five bonus marks on the group mark, capped at 100. Examples are real results from your posts, interviews with real customers, content in English and a local language, or a survey whose results changed a decision.

You may use AI tools, and you are encouraged to, but you are responsible for everything you hand in. Check every fact, never let AI invent customers, reviews or prices, and keep the AI use log in Appendix C. A group that cannot explain its own website will lose marks, whoever wrote the code.

Appendix A: The Website Prompt

Copy everything in the grey box into an AI assistant. Replace every item in square brackets with your own details. Send it. Then go to Part 6.

```
I am a student with no coding experience. Please build a simple website for the
business below, using only HTML and CSS. Explain things in simple words.

ABOUT THE BUSINESS
Name: [business name]
What it sells: [products or services]
Customers: [everyday customers, and the kind of business customers]
Place and delivery area: [town and areas]
Style in three words: [for example fresh, friendly, reliable]
Colours: main [colour], second [colour], background [colour]
Contact: WhatsApp [sample number], email [group email], hours [opening hours]
One sentence about why customers should choose us: [your sentence]

PAGES I NEED (five pages)
1. index.html: Home, with a big heading, one sentence about us, a button that says
Order on WhatsApp, and three reasons to choose us.
2. products.html: at least six products, each with a name, a short description,
a price in UGX and a picture.
3. about.html: our story and our values.
4. pay.html: How to Pay and Order. Show these payment methods, each in its own
box with three simple steps and the details to pay to: [mobile money MTN and
Airtel], [bank transfer for business customers], [cash on delivery in named
areas], and [card payment through a payment provider]. Use clearly marked SAMPLE
numbers. Add a note that says: This is a student project, payments are not active.
Also explain how we confirm a payment, and our refund rule.
5. policies.html: delivery, returns, a short privacy notice and short terms.
A file called style.css should hold all the design for every page.

RULES FOR THE WEBSITE
Make it look good on a phone first. Use the same menu and footer on every page.
The footer must say: Student project for BUC3106 at MUBS.
Do not invent real phone numbers, prices, awards or customer reviews. Mark any
example as SAMPLE.
Use simple picture names, such as hero.jpg, product1.jpg, product2.jpg, and put
them in a folder called images.
Write short comments in the code that explain each part in plain English.

HOW TO GIVE ME THE ANSWER
First, list every file I must create, with its exact name. Then show each file in
its own box, with the file name above the box. After that, give me a list of the
pictures I need to make, with their file names. Then tell me in simple words how to
save the files and open the site on my computer.
```

Appendix B: Follow-Up Prompts

Use these after the first version. Paste your own text where the brackets are.

To change something

```
Here is my file [file name]: [paste the whole file]. Please change [describe the
change in plain words]. Show me the full new file, ready to copy and paste.
```

To fix a problem

```
My website has this problem: [describe what you see and what you expected]. Here
is the file: [paste the file]. Explain the cause in simple words, then show me the
corrected file.
```

To understand your own site

```
Explain index.html and style.css to me part by part, as if I were a first-year
student. After each part, ask me one question to check that I understood.
```

To plan your social media content

```
You are a social media planner for [business], which sells [products] to
[customers] in [place]. Our voice is [three words]. Make a two-week calendar for
[platform]. For each post give: the day, the goal, the format (photo, carousel or
short video), a caption under 60 words, three hashtags, and a one-line description of
the picture I should make in Canva. Include one post that answers a customer
question and one that shows how we work. Do not make claims I cannot prove.
```

Appendix C: Group Records

Contribution Log

Fill this in every week. Each member writes what they did, adds proof, and initials the line. The group leader signs at each checkpoint.

Member	Role and task	What I did	Proof (file, link or screenshot)	Initials

AI Use Log

Tool	What I asked (short)	What I used from it	How I checked it	Member

Peer Evaluation

This section is used to assess the relative contribution of each group member to the group project. The information provided will be treated confidentially and used by the lecturer to support a fair assessment of individual contributions.

Instructions

1. Evaluate every member of your group, including yourself, by indicating the percentage of the group's total contribution attributable to each person.
2. Allocate percentages based on each member's actual contribution to the project, considering participation, completion of assigned tasks, quality of work, reliability, collaboration and fulfilment of responsibilities.
3. The total percentage allocated to all group members **must equal exactly 100%**.
4. Allocate percentages fairly and honestly. Members who contributed more may receive a higher percentage, while those who contributed less may receive a lower percentage.
5. Complete this form independently. Do not discuss or share your individual allocations with other group members.
6. Submit the completed form directly to the lecturer. Do not share your responses with other students.

Section A: Student Details

Group Number/Name: _____

Name of Evaluating Student: _____

Section B: Allocation of Contributions

Enter the name of every member of your group and the percentage representing their contribution to the overall group project.

No.	Name of Group Member & Reg. Number	Contribution (%)
1		
2		
3		
4		
5		
6		
7		
8		
9		
10		
	TOTAL	**100%**

Section C: Confirmation

I confirm that I have completed this evaluation independently and that the percentages allocated reflect my honest assessment of the contributions made by the group members.

Signature/Initials (optional): _____

Date: _____

For Lecturer's Use Only

Individual Reflection

What exactly did I make, and where can it be seen? What did I learn that I could not have learned from the notes alone? What went wrong, and what did I change because of it? What would I do differently if I started again tomorrow?
